TITLE:

X-Ray Diffraction Investigation of Carbide-Formation Processes During Tempering of Hardened Alloy Steels

PERIODICAL: Fizika metallov i metallovedeniye, 1960, Vol.10, No.4, pp.622-627

TEXT: The authors state that there are divergent views on carbide-formation effects even in carbon and low-alloy steels as well as in alloy steels. They describe their investigation of steels with various contents of carbon (0.2 to 1.0%) and alloying element (0.6 to 7.7% Cr, 1.2 to 5.5% Mn, 0.3 to 2.2% Mo, 0.1 to 10.3% V and 0.6 to 18.1% W). Chromium steels were hardened from 1150 to 1300, manganese from 950, molybdenum from 1100, vanadium and tungsten from 1200-1350°C. Tempering was effected at 200, 300, 400, 500, 600 and 680°C. Carbide phases formed at different stages of tempering were separated electrolytically and studied by X-ray diffraction (Debye method, chromium radiation), the powder being contained in a celluloid film. Phases found for various tempering temperatures

TITLE: Determination of safe and unsafe boundaries of the stability region in the case of sevn-focus-type equilibrium

SOURCE: IVUZ. Radiofizika, v. 8, no. 5, 1965, 994-1001

TOPIC TAGS: automatic control theory, differential equation, control system stability

ABSTRACT: The problem of determining the safe and unsafe boundaries of the stability region in the case of a sevn-focus-type equilibrium is determined in a general case. The paper consists of two sections. In section 1, for a second-order system expressed in the usual variables, an explicit expression is derived for the quantity  $g_0$ , whose sign determines the character of the stability boundary in the case considered. In section 2,  $g_0$  is obtained in the explicit form for a system of  $n$ -th order expressed in canonical variables. It is shown that  $g_0$  depends only on the co-

TITLE: Luminosity of Converter Flame During the Fining of Blister Copper (O svechenii plameni konvertera v period dovodki chernovoy medi)

PERIODICAL: Byul. tsvetn. metallurgii. 1957, Nr 24, pp 20-22

ABSTRACT: A photometric study was conducted of the converter flame (by spectroscope connected to a film camera), and optical monitoring by photoelectric pyrometer with recording potentiometer was performed. In both cases, intensity of emission was found to increase during the fining period, this being connected with an increase in the Cu contents of the melt. Maximum emission of light was attained during the final 5 to 8 min. The subsequent sharp drop is apparently to be explained by the onset of Cu oxidation.

TITLE: The Spectral Analysis of Cobalt Oxide for Admixtures

PERIODICAL: V sb.: Materialy 1-go Ural'skogo soveshchaniya po spektroskopii, 1956. Sverdlovsk, Metallurgizdat, 1958, pp 62-63

ABSTRACT: The sample is placed into the opening of a carbon electrode 2 mm deep and 1.5 mm in diameter, the butt of which is sharpened to a cone (walls 1 mm); the upper electrode is rounded off to a truncated cone. The spectra are excited in an a-c arc discharge at 7 a with a burning of 30 sec and an exposure of 90 sec and are photographed with a big spectrograph. The determinable concentration for Ni and Fe is 0.1 - 1.0%, for Cu and Mn 0.01 - 0.4%. The analytic lines are (in A): Ni 3099.1-Co 3054.7, Fe 2719.0-Co 2719.5. Mn 2801.0-Co 2803.7, Cu 2997.3-Co 3048.1. The standards are prepared from oxides obtained by the calcination of salts.

**TITLE:** The effect of a betatron  $\gamma$ -radiation on X-ray films and compilation of exposition graphs for the radioscopy of steel  
**PERIODICAL:** Referativnyy zhurnal. Otdel'nyy vypusk. Izmeritel'naya tekhnika. no 17, 1962. 61 abstract 32.17.417. Collection "Betatromaya gamma-defektoskopiya stali" M. AN SSSR, 1961, 10-25

**TEXT:** A sensitometric investigation of the effect of betatron radiation on different films was carried out and the radiarion intensity distribution in the ray cross-section was measured. The Agfa company (GDR) Lane, Sino, Texo-R, Texo-S films and the high-sensitivity home films of factory No 8 "rentgen-X-opytnyy" and "rentgen-X-opytnyy" with one sided glaze were investigated. The sensitometric film parameters were investigated in direct exposition to the betatron radiation as well as in expositions behind steel plates of different thickness. The results of the investigations are discussed and exposition graphs are constructed on the basis of the sensitometric data obtained. An example of exposition calculation is given. It is shown that the most sensitive to the betatron  $\gamma$ -radiation film is the experimental "rentgen"-X with 2-sided glaze. There are 13 figures. Bibliography: 19 titles

*Motovilov, G. V.*  
AUTHOR: Motovilov, G. P., Doctor of Agricultural Sciences 30-11-01/23  
TITLE: A Joint Expedition of Bulgarian and Soviet Forestry Experts  
(Sovmestnaya ekspeditsiya bulgarskikh i sovetskikh lesovnikov).  
PERIODICAL: Vestnik AN BSSR, 1957, Vol. 27, Nr 11, pp. 135-136 (USSR)  
ABSTRACT: In 1956 the above-mentioned expedition began with the studies of the fir-, pine- and beech-woods of Bulgaria. The members of the expedition investigated the physical and chemical properties of the soil, occupied themselves with forest-hydrological investigations and various forestry problems. In 1957 the works were exclusively concentrated upon the conifers. It was found that the present state of the stands of conifers is by no means satisfactory. Essential improvements will have to be made, especially regarding the methods of clearance. The problem of afforestation also plays an extremely important part and was hitherto too little thought out in Bulgaria. A typological classification of the forest stand which usually is very dense on the slopes of the mountains must be made.

Authors : Neporent, B. S.; Borisevich, N. A.; Klochkov, V. P. and Motovilov, O. A.

Title : Effect of surrounding medium and supply of oscillation energy of molecules on continuous spectra of organ. compounds

Periodical : Izv. AN SSSR. Ser. fiz. 18/6, 674-675, Nov-Dec 1954

Abstract : Investigation was conducted to determine the changes in spectra caused by the addition of a foreign gas or vapor to the vapors of the substance investigated. The molecules of 3-animophthalimide and 3,6-tetramethyl-diaminophthalimide were analyzed to establish the effect of the oscillation energy supply on the form of their spectra. Results showed that the addition of foreign matter effect only the position of the electron levels of the molecules. The intermolecular reactions causing displacement of the levels are determined by dispersion forces. Three USSR references (1951 and 1953). Table; graph.

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 7, 1966, 68

TOPIC TAGS: photometry, photometer, photometric analysis

ABSTRACT: This Author Certificate presents a visual photometer for measuring the thickness of layers in the ultraviolet range of the spectrum by the method of color transformation. The photometer contains light sources, a luminescent screen, and light filters for the ultraviolet range of the spectrum (see Fig. 1). To increase the intensity of the working stream, spectrozonal mirrors with a high coefficient of reflection are placed in the stream to separate the ranges of 240--280 m $\mu$ , 280--330 m $\mu$ , and 330--400 m $\mu$ . The screen is divided into three sectors luminous in blue, green, and red light. A rotary Dove prism is placed in front of the ocular.

TITLE: A method of producing films from a mixture of substances by cathodic sputtering. Class 48, No. 190757

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 2, 1967, 147

TOPIC TAGS: thin film, ~~multiple substances~~ <sup>metal</sup> film, film deposition, ~~metal~~ cathodic sputtering, ~~metal~~ metal deposition, cathode

ABSTRACT: This Author Certificate introduces a method of producing films from mixtures of substances by cathodic sputtering. To obtain films with a given composition and thickness, the film is deposited on the substrate successively from each of the cathodes, which are insulated from one another. The deposition time under each cathode depends on the required thickness of a porous layer from the component of a corresponding cathode. [MS]

The following is among dissertations of the Leningrad Polytechnic Institute imeni Kalinin:

"Theoretical and Experimental Investigation of the Differential Protection of Transformers, with Building-Up Against Impact Currents of Magnetization." 3 January 1948. An examination was made of the problem of determining the magnitude of the impact current of magnetization of power transformers and of magnetizing currents of current transformers. A theoretical and experimental investigation is made of one of the most perfect systems of the blocking of the differential protection, viz., the system of blocking with rectified current. A procedure is developed for calculating the elements of the blocking system with rectified current and a design solution is given.

PERIODICAL:

Izvestiya vysshikh uchebnykh zavedeniy - Energetika,  
1959, Nr 2, pp 26-29 (USSR)

ABSTRACT:

For controlling and adjusting cutout relays and also  
for determining the blocking angle of differential-  
phase protecting devices, the phase characteristic  
is determined which is a dependence of the cutout  
relay current and the angle of shift between the cur-  
rent vectors and the line ends, as shown by figure  
1. Thereby it is desirable to imitate the input  
circuits of the protective relay in such a way that  
the system of phase characteristics of the differen-  
tial-phase protectors may be produced independently

Card 1/3

SOV/143-59-2-4/19

A Device for Measuring the Phase Characteristics of Differential-Phase Protectors

for each set. For this reason, the authors designed a device for measuring the phase characteristic of differential-phase protectors on the principle of the polarized relay RP-4, as shown by the circuit diagram, figure 2. One coil of the polarized relay is excited by ac of 127 volts from the power mains, while the other coil receives the same voltage thru a phase regulator. Terminals 1, 2, receive dc voltage, while terminals 3, 4 are connected to the primary coil of the transformer in the phase-comparing instrument. The authors explain the function of this device, which may be used, not only for obtaining the phase characteristic of differential phase protectors, but also for setting the cutout relay to a given blocking angle. The aforementioned operations may be performed prior to installing the

Card 2/3

A Device for Measuring the Phase Characteristics of Differential-Phase Protectors

Izvestiya vysshikh tekhnicheskikh zavedeniy, Energiya  
no. 11, 1961, 1205

TEXT: The installation proposed by the authors is intended for  
telesignalling systems using a physical line as a connecting  
channel. A diagram of the system is given and its operation described.  
The system consists of several relays connecting corresponding  
lines with the semi-unit. A method of design devised for telesig-  
nalling devices with amplitude-pole choice and a supply of  
so described. This article was recommended by the Kafedra elekt-  
cheskikh stantsii (Department of Power Stations). There are 3

signals

**PERIODICAL:** Izvestiya vysshikh uchebnykh zavedeniy. Energetika,  
no. 6, 1962, 9-15

**TEXT:** Telesignalling equipment has been designed for transmitting 3-6 signals along physical communication lines to a distance of 10-15 km. The telesignalling sets comprise two units, a dispatcher station and a signalling station with line connections. The polar attribute is employed for signal transmission or amplitude-polar attribute in the case of the 6-signal device. The system has a 60 - 220 V a.c. supply which can be applied at either end according to the local conditions. The 3-signal system employing the polar attribute transmits the first signal on positive d.c., the second on negative d.c. and the third with positive and negative d.c.

Card 1/2

Telesignalling devices operated ...

D238/D308

simultaneously. The signals are arranged so that the third is the least important, since only the first and second can be transmitted simultaneously. The 6-signal system has two sets of relays with different sensitivity. Currents at two amplitudes are introduced at the signalling station by a simple resistance. The experimental model was built on a horizontal chassis with a sloping front panel. Performance tests indicate that signals are reliably received with line resistances fluctuating from 0 to 3000 ohms and with supply voltages from 40 to 110 V. The devices are recommended for simplicity and reliability in converting supply substances for urban networks and industrial distribution systems. There are 7 figures.

Title : The Treatment of Rheumatic Carditis with Vitamin  
B<sub>1</sub>.

Orig Pub: Sb. tr. Stalinsk. in-t usoversh. vrachey, 1957,  
Vol 27, 27-31.

Abstract: 12 patients with acute rheumatic damage of the heart were given intramuscular injections of one ml of a 5% solution of thiamine (T) twice a day, and two patients were given one ml of the 5% solution in 40% glucose intravenously once daily. In 3 patients, 10 of the doses for intramuscular injection were given intravenously. After a course
